

HB 4113 STAFF MEASURE SUMMARY

House Committee On Business and Labor

Prepared By: Tyler Larson, LPRO Analyst

Meeting Dates: 2/2

WHAT THE MEASURE DOES:

Adds bladder and female reproductive cancers as occupational diseases which are presumed to result from employment for nonvolunteer firefighters with five or more years of employment.

ISSUES DISCUSSED:

EFFECT OF AMENDMENT:

No amendment.

BACKGROUND:

Workers' compensation law requires most employers to provide their workers with workers' compensation insurance coverage; the law provides an exclusive remedy for job-related injuries and occupational diseases. Oregon law establishes that certain cancers, including oral, respiratory, digestive, and male reproductive cancers, are presumed to be a compensable occupational disease for non-volunteer firefighters who have been on the job for at least five years. An insurer or self-insured employer can rebut the presumption by providing clear and convincing medical evidence that cancer was not caused or materially contributed to by the firefighter's employment.

A study by the National Institute for Occupational Safety and Health of over 30,000 career firefighters who served in the Chicago, Philadelphia, and San Francisco Fire Departments between 1950 and 2010 found the firefighters showed higher rates of certain types of cancer than the general U.S. population, including digestive, oral, respiratory, and urinary cancers.

House Bill 4113 adds bladder and female reproductive cancers to the list of cancers that are presumed compensable for non-volunteer firefighters with five or more years of service.
