

Submitter: Jared Carkin

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB1589

Respectfully,

We need more facts before we consider legislation that affects so many families in our community. Regulations that limit the public's use of shared resources must be looked at from all sides to avoid unintended consequences. Our extended family has 5 generations of Oregonians who have happy memories of sharing time together in the "Newberg pool" for a few hours during our very busy summers, it's an important time for us to connect and bond that would be lost with these new regulations.

If I lived on the river, I might also be tempted to be in favor of restrictions on the public's use of this resource. That's why it's our representatives who must consider other uses of this waterway as well. Please wait for more complete scientific data before we further regulate this shared resource.
