

Submitter: Steven Johnson

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB1589

I support this bill because I'm concerned about adverse impacts of large towed watersport motorboats. Large watercraft are designed to produce very large waves and such waves can be destructive to shoreline beaches and structures and are hazardous to other types of river users (kayaks, canoes, swimmers, paddleboarders, etc.) It makes no sense that people creating large waves for their own enjoyment are denying others a pleasant experience at the same time. Please support this bill and limit the size of watercraft used for towed wake-producing boats.
