

Submitter: Joyce Nease

On Behalf Of:

Committee: House Committee On Rules

Measure: HB4133

This bill is a blatant setup for fraud. Changing party preference online is one thing. To suggest that voter registration can be done securely online is either extremely naive or setup for dishonesty in all future elections. I would say anyone who supports this bill falls into one of those two groups. Internet hacking happens every day, against individuals, against small companies and giant corporations, and especially against government systems around the world. Why would you think online voter registration is secure? Vote NO!
