

Submitter: Tomas Kaminskas

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB1589

No one that owns a boat supports this bill! You are creating unnecessary traffic on roadways where people are pulling their boats to other docks. They are navigating unknown waterways and causing congestion and creating an unsafe environment for the rest of the boaters. Most people on the waterfront own their own boat and are probably writing the same sentences.

There are no studies that are peer reviewed that show any evidence or any concrete facts that these boats are damaging anything.

You are creating a lot of traffic in already very congested areas where people are partaking in watersports behind the boat. High boat traffic and people trying to partake in watersports behind the boat is an indicator to an increase in boat related incidents.

This bill is not meant to benefit anyone on the waterfront or any of the boat owners, so what or who is this bill meant to help???

Perform studies and account for the results of the studies that can be peer reviewed before making decisions that affect other people and putting the rest of us in danger when we are trying to safely and responsibly enjoy our weekends.
