

Submitter: Meagan Brasher

On Behalf Of:

Committee: House Committee On Health Care

Measure: SB1529

SB 1529 has gone through a variety of changes in language from when it was first submitted. It is concerning that there are no clear metrics for one to determine what a health care emergency is. Without these, the decision and power to declare an emergency is given to one person and could result in an abuse of power. We are a nation and state built on a system of checks and balances and it would be in great error for this bill to be passed without a more in depth review and better parameters written on what constitutes a health care emergency in the future.
