

It is really critical that we give priority to maintaining and increasing the safety of our highway infrastructure and adding transit, bike and pedestrian capacity. It is also important to mitigate past injustice by adding the Rose Quarter freeway caps. You should absolutely NOT increase the problems for future generations by adding freeway lanes. Tolls and HO/T lanes can be much more effective at relieving congestion than more disastrous highway widening. It is a much quicker and better solution for moving both people and freight using existing capacity. Please do the sensible thing!

Bill Scott
