

COMMUNITY CORRECTIONS PRACTICES AND RECIDIVISM

KEN SANCHAGRIN | DIRECTOR | CRIMINAL JUSTICE COMMISSION
JEREMIAH STROMBERG | ASSISTANT DIRECTOR | DEPARTMENT OF CORRECTIONS

COMMUNITY CORRECTIONS

- Responsible for 21,560 adults on supervision
 - Local Control: 264
 - Parole/Post-Prison Supervision: 10,407
 - Probation: 10,546
 - Transitional Leave: 343
- Supervision and community-based sanctions and services are provided by counties through intergovernmental agreements

RNR PRINCIPLE

- **Risk/Need/Responsivity Principle:** An individual's recidivism can be reduced if the level of services provided is proportional to the risk to re-offend.
- **Risk:** Use of validated instruments to inform the level of supervision.
- **Need:** Identifying the factors most important to address: Attitudes, addiction, mental health, education, housing, employment, pro-social activities.
- **Responsivity:** Matching individuals based on their risk, gender, age, race, and more to programs that are culturally specific, gender responsive, trauma informed.

Recidivism

Definition and Basic Approach

- ORS 423.557 defines recidivism as an **arrest, conviction** (felony or misdemeanor), or **incarceration** for a **new crime** three years or less after a person is released from incarceration or sentenced to probation.
- CJC examines DOC-defined six-month **probation** and **parole-PPS** cohorts twice per year (June and December).
- The results of these analyses are published on the CJC website and additional information is available via CJC's online data dashboards.

Recidivism

Parole-PPS 3-Year Recidivism Rates as of December 2022

- Between 2010 and 2017, recidivism increased.
- Beginning in with the 2017 cohort, rates of arrest, conviction, and incarceration recidivism began to decline significantly.
- The decline starting with the 2017 cohort corresponds with the beginning of the COVID-19 pandemic and the passage of BM 110.

Recidivism

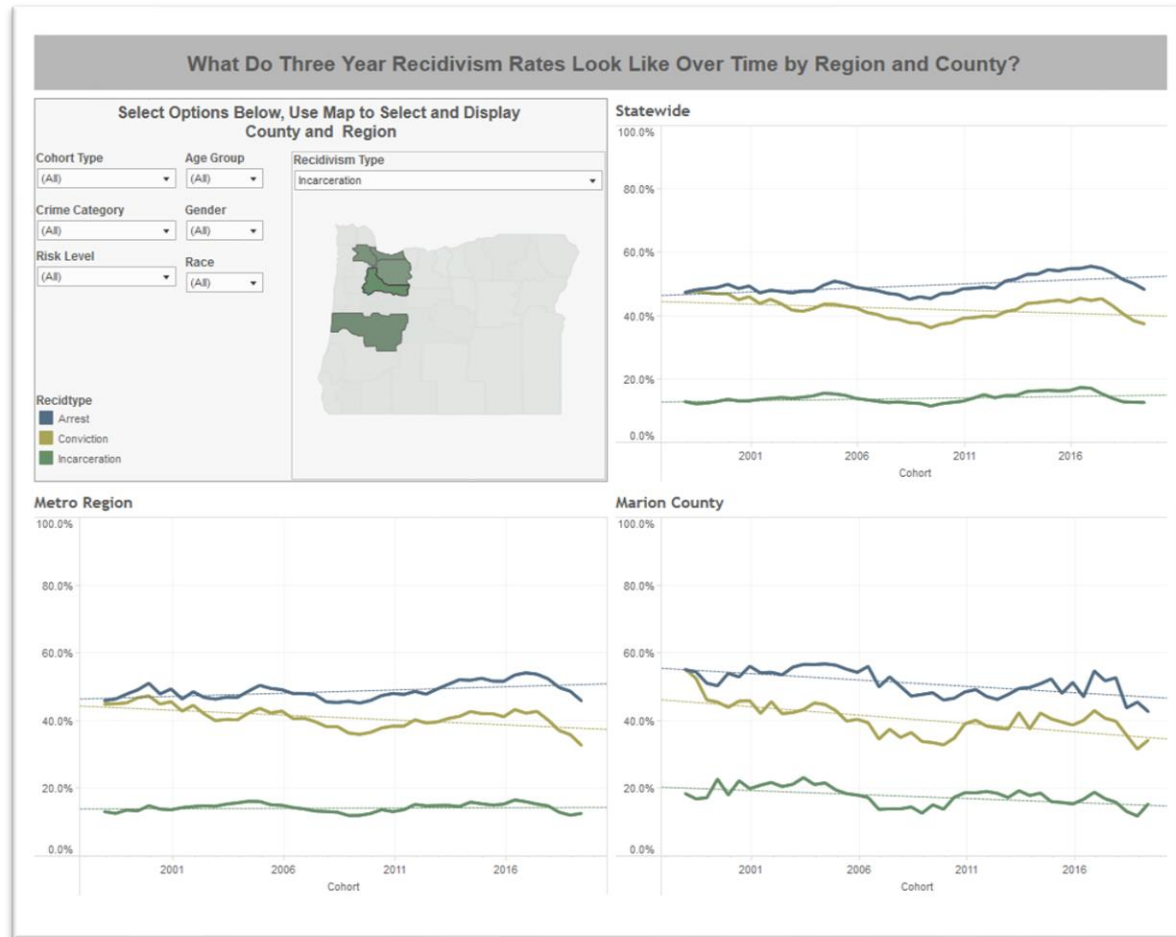

Probation 3-Year Recidivism Rates as of December 2022

- Similar to the Parole/PPS Cohorts, between 2010 and 2017, recidivism increased.
- Beginning in 2017, rates of arrest, conviction, and incarceration recidivism began to decline significantly.
- Unlike Parole/PPS, incarceration recidivism has increased for the past two probation cohorts.
- The 2017 decline corresponds with the COVID-19 pandemic and the passage of BM 110.

Recidivism

Online Data Dashboards

- To supplement our biannual reports, CJC also provides additional detail via our dashboards, which contain:
 - County-specific recidivism rates, along with comparisons to similar counties.
 - One-year recidivism rates, which are highly predictive of three-year rates.
 - Average time until the recidivating event.
 - Risk score changes over time by cohort.

Recidivism

Moving Beyond the Basics

- In addition to the biannual examination of statewide and local recidivism rates, our analysts also conduct more in-depth analyses. Examples include:
 - Impact of Ballot Measure 110 on recidivism trends,
 - Long term recidivism (5-, 10-, and 15-year),
 - Relationship between original offense and recidivating offense (i.e., “specialization”),
 - Recidivism differences by gender, and
 - Comparison of recidivism rates for Short-term Transitional Leave cohorts.

Recidivism

The Impact of Ballot Measure 110 on Parole-PPS Cohorts

- The most common crime triggering a recidivating event has been PCS. Since PCS is now a violation, CJC elected to examine this impact on historic recidivism rates.
- After “removing” PCS recidivism, overall trends remain the same, although lower across the board.
 - Arrest recidivism is, on average, 1% lower.
 - Conviction recidivism is, on average, 4% lower.
 - Incarceration recidivism is, on average, 3% lower.
- Ballot Measure 100 does not account for the recent fall in recidivism rates. It is likely that lower levels of enforcement and LEA staffing shortfalls are playing a role.

Recidivism

Long-term Recidivism Rates

- In 2019, CJC examined long-term recidivism rates.
- The data clearly shows that recidivating events can continue to happen beyond the three-year window.
- However, the majority of recidivism is captured within three years, lending support to its use as our statutory standard.
- This also has implications for expungement timelines, as 80-90% of all recidivating events happen within 5 years.
