

Global Warming Petition

From the Office of
Senator Art Robinson
Senate District 2

On your desk is a copy of the list of 31,478 scientists who signed a petition stating that there is no scientific evidence that the release of carbon dioxide and other greenhouse gasses are changing the earth's climate.

I encourage you to look this over. There is a review article on the subject along with the names of the signatories, 9,029 of whom hold PhDs.

Although this petition was last updated in 2009, there has been no change in the relevant data trends.

Carbon dioxide is not a pollutant. It is not changing the earth's climate. Our climate has always fluctuated. Did you notice the recent weather?

As I mentioned two years ago, you can set your mind ease. You do not need to worry about your "carbon footprint". It is not changing the climate.

Global warming or "climate change" is an example of a scientific subject that has been hijacked for political purposes.

Most government supported scientists are now endangering their careers if they do not endorse one side of this subject.

Even suggestions that fluctuations in the intensity of the sun might be responsible for variations in the earth's temperature are no longer welcome. Anyone should be able to understand that the sun might be relevant when discussing temperature!

The scientific method involves generating a hypothesis and then doing experiments to try and disprove it. The climate change hypothesis is easily disproved.

Let's not waste resources on "climate change."
