Committee: Senate Committee On Rules

Measure: HB2004

For my mathematics capstone project for graduation at Southern Oregon University in 2008, I opted to research ranked choice voting. Not only did I find it was simple to use, but also that it was a better means for promoting democracy by selecting a candidate that is more popular overall than our current system. While ranking a list does have more steps than selecting a single choice, it is still a very simple process.
