

Submitter: Janay Trimble

On Behalf Of:

Committee: House Committee On Behavioral Health and Health Care

Measure: HB2278

I oppose this bill. Babies and children are already being injected with more adjuvants in these vaccines such as formaldehyde, Mercury, glyphosate and aluminum that cause more harm to children. These adjuvants penetrate the blood brain barrier and cause multiple autoimmune and neurological disorders. Also the flu injections do not keep them from contracting the flu as the formula can not keep up with the morphing strains of the flu through out the season. Let your child contract it naturally for their own immune system to fight off.
