

Submitter: Mark Cosby

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB405

Hello Senate committee.

I wonder at what cost to the consumer this filter system will cost ?

I wonder how easy such a filter would be to maintain ?

I wonder when the filter is cleaned if one should dump fiber in a landfill or use in a garden space ?

I wonder if the fiber should be burned and that carbon given to plants for carbon sequestration ? (yes a honest question).

And lastly are plastic fibers going to get filtered more efficiently than a mask filters a virus ?

Thks for your time.
