

I OPPOSE [SB 405]: "Microfiber filtration" for washing machines by 2026

One of these days, not in 2026, such a dream of "Microfiber filtration" for washing machines will occur.

What is needed, now, is a comprehensive review and discipline to redesign of Publically Owned Treatment Works (POTW).

The "Filtration" sector of POTWs is at issue.

"Microfiber filtration" can be achieved by "Reverse Osmosis."

"Reverse Osmosis" produces clear, drinkable water. The downside-it requires a lot of process power and creates "Brine" issues.

[SB 405] mandate is unworkable for a myriad of reasons but, the concept and passion is welcomed.

David S. Wall

Mr. Oregon Concur...*How many POTWs discharge into an Oregon River near you?*
