

Submitter: Ray Quisenberry

On Behalf Of:

Committee: Senate Committee On Natural Resources

Measure: SB530

Dear Senators

I am in strong support of SB530. Land use, especially agriculture and forestry, has a large impact on our climate. Empathizing natural solutions in dealing with the climate emergency helps keep a great deal of carbon out of our atmosphere and puts it back into the soil, where it helps with fertility and water retention. It's a benefit to our natural resource businesses, and to our climate. In fact, we can't reach net zero by 2050 if we don't. We need to pass SB530.

Thank you
