

Submitter: I E  
On Behalf Of: my cancer patients  
Committee: House Committee On Climate, Energy, and Environment  
Measure: HB2215

I am a Nurse Practitioner with an additional Masters in Health Education for 42 years and I work with Breast Cancer Patients. I am tremendously OPPOSED to H B 2215. I have had multiple patients harmed by living near nuclear facilities in other states

We do not need nuclear facilities in the state of Oregon and there has not been any successful situation in dealing with the spent nuclear waste that will be around for millennia either. We have other options with clean safe hydro power, wind, wave technology and some solar that would be tremendously better in the state, than having nuclear power or nuclear waste storage facilities that historically have been hazardous.

I have 4 women who were "Down Winders" of the Hanford Nuclear site. Two of them had fathers that were nuclear scientists and they all had to live on the Hanford site and pee in a cup every week to see if there had been a nuclear accident/ or nuclear radioactive leak as children.

All 4 of these women developed breast cancer, 2 also had ovarian cancer. ALL of their other family members as Down Winders or living on the Hanford site had cancers of varying types: Prostate, most of them had thyroid cancer, lung, leukemia, bone cancer, stomach and more cases of breast and ovarian cancers in the other family members of my 4 patients.

This would be total negligence to have a nuclear facility or nuclear waste stored in Oregon. The medical bills for people that you will harm over time with cancers and their loss of income and financial ruin does NOT justify this wimpy idea that this will some how solves global warming in this state.

"The S M R track record so far

The track record so far points to the same kind of dismal economic failure for S M Rs as their larger cousins. Figure 2 shows the capital cost escalation for the proposed Nu Scale reactor and actual costs of two foreign S M Rs. As a result, the total cost of a proposed project in Idaho using the Nu Scale design has already risen from around \$3 billion, in 2015, to \$6.1 billion, in 2020, long before any concrete has been poured."

<https://www.ewg.org/news-insights/news/why-small-modular-nuclear-reactors-wont-help-counter-climate-crisis>

The whole track record of this state pushing v ax mandates for shots that did not stop transmission, and were NOT safe or effective and now causing CV v ax injuries and CV deaths due to the experimental shots and not dealing with that either is horrendous. Do not increase the more than 41 percent of all cause mortality that exists ( according to National Life Insurance Companies since they are paying out for these CV jab caused deaths since 2021) due to the CV shots and add to that the suffering and costs of harming the Oregon citizens with a nuclear threat / materials/ building a plant/ storing radioactive waste....is abhorrent.

. Watch the US Senate Hearing with Senator Ron Johnson 12-7-22 which is on Children's Health Defense TV to actually learn something before you harm anyone else. A US Senate Hearing should not be a "Conspiracy Theorist Platform"

I have been a Democrat for 38 years and now I am a registered Republican.....what you have done in the governance of this state is deplorable.

Do not add to your mess. This will NOT fix the "Climate Issue" in this state.
