

Submitter: Jeffrey Weitzel

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB545

SB 545 is a no brainer, the lowest of low hanging fruit for taking back some the trash that is filling up our oceans and landfills. Plastic is rarely recycled and is a scourge on the environment and our bodies. Paper is likely, sooner or later, to end up as litter, or in a landfill, turning slowly into methane to warm our planet. It is such an easy first step to give consumers the option to forego single use plastic or paper bags and containers for food and instead reuse a durable container. It would be a disgrace if this bill did not become law.
