

Polystyrene Items

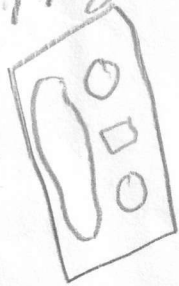

Plates

Cups

Trays

Bowls

Utensils

Polystyrene is very harmful to the environment. It kills little sea turtles looking for a snack. It gets into our bodies through the water we drink, and the food we eat. Polystyrene is not biodegradable, and that is a very big problem. However, there are substitutes, such as plantable packaging, which composts back in to the earth. I hope you do choose to ban polystyrene, and help Oregon by doing so.
