

Submitter: David Lemon

On Behalf Of:

Committee: House Committee On Behavioral Health and Health Care

Measure: HB2996

This farce of a bill has come to my attention. I call it a farce since it can and will put countless people at risk. Would you go to or trust a "doctor, nurse or a nurse practitioner" to do more than talk with you if they didn't have the pertinent knowledge and training? I know I wouldn't. Same applies here. If they aren't required to pass a written exam, how do you know they have the knowledge to handle the radiological procedure or equipment? You might as well forego ALL training and exams and give them free reign to poison people randomly.
