Committee: Senate Committee On Natural Resources

Measure: SB812

I support this bill. We are seeing global bird populations decline at an alarming rate. Human activity is the cause. Recreational activities do not need to threaten others and need to be regulated to protect wildlife. I recently witnessed American Crows, an incredibly adaptive, now urban dweller, in extreme distress while reacting to drones flying nearby in a city park. There is already evidence of drones disrupting breeding sites. We need to be proactive now before more avian populations decline.
