On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure: HB2215

If there's not an adequate repository for terminal disposition of radioactive waste, then the nuclear plant should not be built. Another very important criteria is COST! Nuclear energy has always been the most costly type of energy. Who will pay the bill to have the plant constructed? Where will the radioactive waste go? Will it be stored on site? If so, for how long? It's foolhardy to plan for a nuclear plant without being able to answer these questions.

What about solar arrays? They're cleaner and safer, and would possibly provide more jobs!
