

Submitter: Mark Puhlman

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure: HB2816

For the record, my name is Mark Puhlman and I live in Lake Oswego.

I encourage you to pass HB 2816 with the amendments the proposers developed with significant stakeholder feedback. I support HB 2816 because I believe it is the responsibility of high-energy users to responsibly generate their power from renewable sources. Our planet is warming and it is up to all of us to eliminate our reliance on fossil fuels.

HB 2816 simply ensures that the goals of cleaning up energy generation in Oregon over time that was passed by the Legislature in HB 2021 are not undercut by data centers and crypto-currency companies with high-energy needs. I think Oregon could see economic and social benefits from welcoming these industries into our state, and Oregon has much to offer them in energy costs, tax benefits, and undersea data cable access. However, I believe growth in this industry should not come at the cost of Oregon being unable to meet its statewide goals for clean energy generation.

We have some reasons to be concerned, so now would be the time to set standards for the future:

According to the Oregonian, Umatilla Electric Cooperative's GHG emissions have grown 543% since 2010 when Amazon data centers arrived

Cryptocurrency operations are not yet numerous in OR, but in New York State, cryptocurrency operators are vertically integrating fossil fuel power plants.

Data centers are projected to use 58% more energy by 2030 and 128% by 2040, according to industry group NWPCC, which may mean commitments to clean energy generation will be tested.

Although the industry as a whole is voluntarily moving in the right direction with its clean energy goals, Amazon recently sought a permit from DEQ to build on-site gas-powered fuel cells to provide baseload power for three data centers. This application should be denied and this legislation would negate any attempt to increase their carbon footprint in the state. These large corporations have an incredible opportunity with the Billions in profits they have made to make a huge difference in our journey towards renewable energy.

HB 2816 would prevent this type of infrastructure, which would have a decades-long

lifespan, and contravene Oregon's clean energy goals.

Fortunately, most of these high-energy-demand companies are already publicly committed to doing better than the HB 2021 phase-in goals. HB 2816 will not affect these companies' plans for how they meet their energy demands, and the administrative requirements for confirming compliance would be minor.

Thank you for the opportunity to testify, and please support HB 2816.

Sincerely;

Mark Puhlman
