

Submitter: NW Coast Range

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB522

SB 522 SENATE COMMITTEE ON ENERGY AND ENVIRONMENT

Climate change or global warming name change is nothing more than legislature changing dates and percentages to reach sometime in the future, not necessarily a name change, what Oregonian cared the first time this commission is name. Its not about the future of climate it is the decimation of what humans have already done to the earth.

Earth needs healed; the 50 states and the federal government historically have been horrible stewards of earth. Open pit waste disposal, exporting apparel to lie in the no-man's land in a developing countries, plastic waste higher than all the buildings heights in the world, open sea plastic waste stuck in current change vortexes, open pit sewage treatment facilities, Hanford Nuclear (Power Plant) Reservation, desertification caused by poor planning and failure of catchment for refilling aquifers and reservoirs. Subsequent, floods hundreds or thousands of mile away caused by desertification runoff and accelerated atmospheric evaporation

Climate change science was financed by the government and like all good minions of government contracting or employment; generally these contractors and employees will follow the narrative of what the political spectrum deems may be a problem of the future. When the politicians in the first place do not know how to describe climate change nor have a crystal ball to predict future climate change. Mitigating pollution already on earth is a historical problem that continues to not be a priority. Although politicians would rather put the cuffs on private businesses and citizens to solve an unproven theory; it's nothing more than green-washing for the profit of a select few corporations/industries that own American politicians.

Watch the government work, government does not care how overinflated government civil servant workforce is or becomes, government does not try to conserve water, energy, or materials, minerals, and metals. Government does not see fit at reducing use of armaments firing or jet fuel use, government replaces equipment and vehicles- because why not, civil servant s have no problem spending taxpayer dollars when Americas infrastructure is failing. Failure of America is worse when it comes to our kids; cannot read, not encouraged to have confidence, and public school system in Oregon that allow teens to graduate without basic knowledge to manage their lives as an adult. Stop the democratic woke agenda and return to basic operation of government otherwise Oregon will be a wasteland of vagrants/vagabonds and no

citizen taxpayers to provide the legislature with a budget of taxpayer funds.
