HB 3037 HOUSE COMMITTEE ON EDUCATION

Oppose bean counting by government and particularly when these studies and counts involve children.

Is it incomprehensible to the legislature that all Oregon school children in the 5th or 6th grade should have the opportunity to go to outdoor school?

Why the study of children when the count of students eligible to attend should be counted by district each year and the districts amount the district intends to contribute to the outdoor school program.

The legislature invariably makes the process more complicated, when the basic principal, its all about head count and the contribution of the school district, not the study of the child participating.
