

Submitter: Sergio Quezada
On Behalf Of:
Committee: Senate Committee On Judiciary
Measure: SB422

Most motorcycle mortalities occur with oncoming traffic on left hand turns. Is Lane sharing 100% safe and effective for a motorcyclist? No, not by any means of the imagination... There will always be risks with anything we do, not just motorcycling. It is however, an effective method of helping automobile drivers to be more vigilant and aware of spatial surroundings , including motorcyclists, thus improving the quality of traffic as well as sharpening the keen observation of drivers. Motorcyclist when experiencing lane sharing, will naturally become better drivers, stimulate and incentivize driving habits of other drivers. Thank you for your time.
