

Submitter: SHAY HALL

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB803

If people have to actually explain how this bill would kill the economy and make thousands of people lose work then i am shocked. There is no way all the companies can afford to switch powertrains or to go full electric, so therefore nobody will get their goods, stores will charge insane rates to make up for shipment fees. It will kill the city and freight in general. the world runs off trucks, this would do nothing but make peoples lives harder and more expensive.
