

Submitter: Ralph Menweg

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB803

Your efforts to ban fuels like diesel are completely wrong ! This Nation is built on the use of trucks, trains, and engines that burn diesel and gasoline. Technology today makes them VERY clean burning but more importantly they are necessary to have our economy survive. If you cannot see this then YOU are the problem and not the fuel.

The massive push for ALL ELECTRIC is wrong in the sense that YOU are not answering the question of “ where does electricity come from ?” It comes from coal and oil and it should be nuclear too, but the “greenheads”don’t want those. So here’s the bottom line for you poorly informed, and poorly educated lawmakers. Electricity is expensive and does not come from the tooth fairy. You don’t have the capability of producing the power you need and are WILLING to cripple a state and nation with your leftist agenda. The easiest solution is to GET RID OF YOU who are mis-governing us !!! Don’t you dare pass ANY legislation that screws with our fuels.

Ralph Menweg
