

Submitter: NW Coast Range

On Behalf Of:

Committee: House Committee On Economic Development and Small Business

Measure: HB2976

Establishes Oregon Spirits Board - Hell to NO, Oregon and the USA fact, alcohol is used heavily. Coroners all over this country are under-reporting deaths caused by alcohol. Alcohol is processed in the human body as methanol; retards and deforms human cells; moreover, alcohol attacks every organ and tissue in the body.

Furthermore, the legislature wants to promote this human bodily poison, have y'all lost your ever-loving-minds?

A better Bill to be legislation if to demand that coroners specify what caused the heart failure, stroke, brain/liver/kidney/bladder/esophagus and all other parts of the human body damaged and/or caused cancers by consumption of alcohol.

Has Oregon set up a trust fund that pays the medical expenses of the persons that died due to the consumption of alcohol, which is also a drug?

Rarely does the death certificate ever indicate that a person died due to the consumption of alcohol but of the disease the consumption of alcohol exasperated and/or increased death.

Alcohol is taxed but not because it is deemed a health risk but more for the idea that it falls into the category of food and entertainment spirits.
