

Submitter: Philip Ratcliff

On Behalf Of:

Committee: Senate Committee On Natural Resources

Measure: SB85

Factory farms are harming our communities. They contribute to climate change, cause water and air pollution, harm the welfare of animals, and push family farms out of business. Factory farms are a significant contributor to the climate crisis already gripping Oregon, generating more greenhouse gas emissions than small and medium farms, especially pasture-based farms. Factory farms emit respiratory irritants like ammonia and hydrogen sulfide.
