

Submitter: Aaron Vaughan

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB488

As a primary care physician who practices in the State of Oregon, I often see the effects of non-medical factors that contribute to health and wellness. Greater than 50% of medical issues can be traced back to an individuals zip code. This includes education, job status, family and social support, income, community safety and one's physical environment. To Support this bill is an essential measure to protect one's physical environment and their health. Please vote to support SB488 to require the municipal solid waste incinerator to meet federal emissions limits.
