

Submitter: Jeff Williams

On Behalf Of:

Committee: Senate Committee On Education

Measure: SB854

Do not indoctrinate our children with the "suto-science of global "man-made" climate change. Children need to be taught, and some adults too that CO2 is a good thing, not a bad thing. The planet warming 1 degree in the past 100 years has some very positive aspects, the negative aspects do not deserve the total break down of energy as we know and use it today. Our children deserve better education, not indoctrination.
