Measure: SB85

Submitter: Colin Koyle

On Behalf Of: SB 85

Committee: Senate Committee On Natural Resources

Measure: SB85

I am very concerned with the impacts and precedent that this bill will set. I am currently an animal science major at Oregon State University and have a large background in agriculture. Farmers care deeply about the environment as it is important to continue raising livestock. This bill would create a huge demand for food and have an extremely negative impact on citizens.

There is no reason the things this bill seeks to evaluate cannot be studied while operations proceed. This would put additional burdens on food supply which could have harmful effects on middle and lower class. This measure is not for the working class! Please do not advance this legislation as written.
