

Submitter: Bill Harris

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB803

Chair and members of Sen Energy and Environment Committee

I strongly support Senate bill SB803.

There are many different things that must be done to make it possible for life (including people) to survive global climate change. I want us to survive.

Converting large diesel engines to electricity is one of these changes which cannot be done quickly. Renewable diesel can be used in the interim with excellent performance and with great reduction of GHG and great reduction of black carbon compared with traditional fossil diesel. Black carbon accelerates melting of snow early with prolongation of summer drought and causes immense amounts of serious lung disease. Human caused GHG is the great threat to life in all forms.

Please move SB 803 forward recommending passage by the legislature.

Bill Harris
