Re: No on SB 4 -4

I am a co-owner of a farm on which the 4th and 5th generations of that farm now work. We depend on our representational government to defend our land use laws so that we can plan for our children's futures and for the people who will need to eat in the future.

Sections 10 and 11 of SB 4 -4 which allow super-siting on good farm land outside the UGBs destroy our beliefs in that government.

Oregonians know that much of the quality of our state is due to 50 years of the land use planning system.

Only communities that have industrial lands already within their UGBs should be used for the semiconductor facility placement. There should be no super-siting by the governor.

Also, perhaps sites outside the Willamette Valley may show rural Oregonians that our state government is looking at facilities that help them also.
