

Submitter: Rosalie Smith
On Behalf Of:
Committee: Senate Committee On Education
Measure: SB854

After reading testimony from several students, it seems that they have been well indoctrinated in the Hoax of Climate Change Religion without learning TRUE climate science. The weather that we are experiencing right now is exactly the same as it was about 40 years ago, and 70 years ago when i was a child. The Climate is a cyclical aspect of this planet that we call Earth. As a retired teacher, I would think that our schools need to refocus on the basics of education that will give them a good basis for a successful life.

The snow that California is experiencing in the Sierras is no worse than what the Donner Party Experienced in 1846. CLIMATE occurs in cycles that can range from 30 to 40 years. The indoctrination of Children must STOP.

Because of the obsession with this New Green religion, hundreds of thousands of people and animals will die because of the lack of food and energy. FOR WHAT

As Michael Crichton said in his book, We should be so arrogant to think that we can control the weather.

He is most famous for his far fetched tale of how dinosaurs could be brought to life with DNA from mosquitoes trapped in amber. Now the bestselling author Michael Crichton has written a thriller about ecoterrorism which the critics say is equally fantastic in its refusal to accept that global warming is a clear and present danger.

With 2m copies of State of Fear hitting bookshops across the world, Crichton's thesis that the interminable yammering of fearmongers about climate change is being used to keep ordinary people perpetually anxious will reach a huge audience.

The story of a South Pacific island which launches a multi million pound lawsuit against the US, and green terrorists who plot to manufacture a series of earthquakes, underwater landslides and tsunamis to prove that global warming is happening, has an unusual denouement: a 14 page bibliography and a five page authorial note explaining his extreme skepticism about global warming.

Crichton fills his latest with graphs and facts against global warming. Rather than warning readers about the dangers of dinosaurs, nanotechnology or rising Japanese power, he bolsters his argument by citing the work of prominent climate change skeptics, including the political scientist Bjorn Lomborg.

The current near-hysterical preoccupation with safety is at best a waste of resources and a crimp on the human spirit, and at worst an invitation to totalitarianism, he concludes.

Highlighting a natural warming trend" currently afflicting the globe, he estimates that in the next century temperatures will rise by just 0.812436C, well-below the estimated by the intergovernmental panel on climate change IPCC.

Calling the scientific consensus on climate change creepy, he told the BBC yesterday: Science has nothing to do with consensus. Politics is about consensus.
