

Submitter: Jonathan Stacey

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB803

Oppose 508 bill.. until we have a better solution in place taking the only reliable source of diesel away is not recommended. This is the least thought out bill yet.. Oregon will be in a major decline because most people and logging outfits can't go out and buy an electric truck for 300,000 and on that note where and how are we going to supply that much additional power?? Especially when you're removing most of the hydro power plants which is one of the biggest power producers known. And also how are you going to turn on the diesel generators to power the power plants with no diesel? You haven't even thought this through
