

Submitter: Martin Silbernagel

On Behalf Of:

Committee: Senate Committee On Natural Resources

Measure: SB789

I oppose SB789 due to climate change and field burning requirements. By limiting Canola farming, effects of climate change will worsen due to long haul truck driving to transport seed/feed for farming livestock. If more Canola is grown locally less emissions would be put in the atmosphere and contributing to climate change. Also, with more Canola farming, less field burning would take place locally.

Increase acreage for canola farming for various and obvious reasons and to include fiscal impact positively for farmers! Thank you.
