

Submitter: Matthew Tabor

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure: HB3152

This is simply more baseless environmental policy from Salem without making the following basic observations as to impact: (1) climate action on the part of the few does nothing, not even an incremental change, if the majority (in this case states) do not follow the action; (2) if there were any impact to my health to utilizing natural gas in my home, my carbon monoxide detector would likely let me know; (3) why is it Salem's default to push regulatory action to the public without requiring itself to first take the action (please advise the status of natural gas appliance applications in all state buildings across Oregon) and publish the results of such action taking (did that action quantitatively and positively impact the occurrence of any detrimental impacts to climate change)?
