

Submitter: Roman Burykin

On Behalf Of:

Committee: House Committee On Behavioral Health and Health Care

Measure: HB2665

An absurd proposition, birthed by someone who has never had any exposure and has no working conceptualization of the inner workings of a neurotrauma, cardiovascular, burn, or any other intensive care unit. I cant even imagine the deafening howl that the wind of ignorance creates as it blows across the barren desert plains inside the head of the person who had the audacity to compose this bill. Ask to shadow an ICU nurse and observe as they perform CPR on a patient who's bleeding out of their esophagus. Hear the cracking of bones under their palms. Watch as the second lead flatlines. Take part in the chaos that is our line of work, for just a few minutes. Shame on you for once again attempting to interfere with our livelihood and our commitment to an excellence that your ankle deep mind is too atrophied to comprehend. Absolutely appalling.
