

Submitter: Harriet Cooke

On Behalf Of:

Committee: Senate Committee On Natural Resources

Measure: SB85

As a physician with a masters in public health, I strongly support this bill. Large factory farms create toxic amounts of animal waste, polluting the local air and water, and contributing significantly to GHG emissions, particularly factory cow farms.

Local citizens and Oregon's small family farmers that raise animals sustainably, are particularly hurt by mega farms. This bill will help us return to sustainable animal agriculture, good for the cows, communities, and sustainable family farms.

Dr. Harriet Cooke
