

Submitter: Rex Watkins

On Behalf Of:

Committee: House Committee On Behavioral Health and Health Care

Measure: HB2002

As a youth sports coach for over 30 years our current "experiment" with gender fluidity is causing untold damage to all our children, not just those that are having difficulty with their "assigned" gender. To have the State of Oregon determine to use taxpayer dollars for "gender affirming care" when so many countries that have tried this and found it to be a) a patently bad idea or b) one that needs more study just proves that our activist government isn't truly interested in science, facts, or reality but more interested in pushing an agenda foreign to large portions of the state. Please seriously consider a "no" vote until we have more information.
