Carbon Neutral NW

Resilient, Efficient Buildings mean better health, lower costs, less pollution, safer communities, and a more livable future for young Oregonians.

Homes and buildings are our first line of defense against climate harms, like extreme heat and wildfire smoke. The buildings where we live and work are also Oregon's second-largest source of climate pollution. We'll gain better health, lower utility costs, and a safer climate by increasing climate resilience with air sealing, additional insulation, weather resistant windows and doors, and transitioning to clean electricity for heating and cooking.

Let's take action in Oregon, so all our homes and buildings are more resilient to protect us from climate harms. Let's make sure new construction is built smart from the start and remove barriers for Oregonians who want to improve current homes and buildings to waste less energy, protect us from climate extremes, and run on clean energy. We must prioritize helping those most harmed by climate extremes and fossil fuels.
