Measure: HB2004

Why does this State continue to incorporate election/voting laws that are far less superior to other systems. It is well known that voting by mail will never be as secure as in person, and yet Oregon chooses vote by mail!! . It is well known that a "ballot harvesting" system is far less superior to an "in person one vote" only system, and yet Oregon chooses the "harvesting" system. And it is becoming more and more apparent that hand counting ballots is far more superior than any machine or computer software system, that will always have vulnerabilities to some highly skilled cyber attacker, no matter how skilled and educated, the election people using them think they are!! Outsourcing Voter Role data to private companies like ERIC, secures my vote how exactly?? How is that more secure than maintaining that personal data/information at the Local level...ya know, like in my own COUNTY!!! I could go into the problems with "rank choice" voting, but why?? Give me one good reason why I should trust any Election decision person in Oregon. Is there any other state, any other Country in the world that chooses to use systems that are so unsurperior to everything else?? To any other election system in existence!!!!!! The elections need to start going in the right direction in this state, and Rank Choice Voting is definitely not it!!!
