Committee: House Committee On Judiciary
Measure: HB2005

This bill is another example of a law fixing a problem that does not exist. By banning a persons right to design, assemble and use a weapon for sport or personal defense, that is not a statistical public safety issue, the legislators are demonstrating the lack of a clear thought process and the stealing of yet another piece of liberty from the voters. This law will only affect honest law abiding citizens and do nothing to stop those who would ignore the laws as they do now. "Ghost Guns" (detectable home made) are only an issue to those who want absolute control over their constituents. An honest person does not need to be controlled. A dishonest person can never be completely controlled no matter how many laws are laid out in the ORS. This bill spits in the face of honest people and handcuffs the freedoms plainly stated in the Oregon and United States Constitution. And just for the record, there is no such thing as an "undetectable" firearm. Un-registered or un-controlled maybe, but no matter what the framework of a firearm is made from, it will always have to incorporate several metal parts which are easily "detectable" using the current technology.

Please step back from this law
