

Submitter: Denise Soden

On Behalf Of:

Committee: House Committee On Behavioral Health and Health Care

Measure: HB2002

Access to evidence-based, safe, patient-led reproductive health care is a basic human right that is not equally afforded to all Americans. The state of Oregon is an example in this country of what it means to have access to these services. We must pass legislation that protects patients and providers from fear of litigation regarding life-saving procedures, including abortion and gender-affirming care. Please allow patients and doctors the resources and freedom to safely make these essential health care decisions together.
