

Submitter: Dale Middleton  
On Behalf Of:  
Committee: House Committee On Judiciary  
Measure: HB2005

So can anyone who supports this bill tell me what an undetectable gun is? I heard someone that says it can't be picked up by a metal detector. Well in that case they need to remember that all ammo uses metal compounds, so it's detectable. Springs firing pins and all the parts are metal, so they're detectable. Is it serial numbers? They can be filed off or destroyed also and truthfully how many shootings have been solved by the guns serial number? This is just another are tactic by people who have no understanding of guns and just making things more unsafe. Leave us legal gun owners alone and solve the gun issues in the cities where the problem lies.
