

I am NEUTRAL on [HB 3232]...Are Salmonid fish populations threatened by "over fishing?"

Habitat restoration programs are underway for Coho, what is happening with Chinook habitat?

*Should "engineered Salmonid spawning waters" use artificial means to increase dissolved oxygen levels?
Does dissolved oxygen interfere with "scent" salmon rely to return to spawn?

Salmonid fishes prefer specific water temperatures.

The temperatures of Final Effluent discharged from local POTWs, cumulatively, are raising the water temperatures of rivers. What is being done to reduce the temperatures of Final Effluent discharges?

David S. Wall

Mr. Oregon Concurs.
