

Submitter: Deborah Knapp

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB525

Dear Senators and Committee members; I respectfully and strongly disagree with the premise of this bill. The expectation of zero emissions standards is not only unrealistic, it is an unreasonable expectation. Just breathing produces emissions. Everything humans do produce emissions. This is part of living. An overly sterile environment would kill us in little time. I strongly oppose this bill and sincerely hope it is withdrawn and the foundation behind it reconsidered.
