

Submitter: Mackenzie Spray
On Behalf Of: SB 525
Committee: Senate Committee On Energy and Environment
Measure: SB525

What if hair dryers were gas powered? What if fans ran on fossil fuels during summer heat waves? Sounds obnoxious, right? How can we say some things can run on electricity while others must run on fossil fuels because it “cost too much” or that it’s just “the status quo” and the way things have been done. We have to realize sooner than later how ridiculous we are for using these loud, dog-scaring, planet killing, and obsolete leaf blowers and other gas powered lawn machines when there are plenty of GREEN alternatives.
