

Submitter: Brandon Venable  
On Behalf Of: Self  
Committee: Senate Committee On Energy and Environment  
Measure: HB2426

I'm a manager at a fuel station in Oregon and I oppose self serve. I deal with many dangerous situations on the daily created by people smoking, leaving their engines running, getting in and out of their vehicles creating static electricity, trying to fill up random bottles and jugs and driving off with the pump still in the vehicle. For someone who spends 10 minutes at a gas station this may not seem like something that is dangerous but when you deal with this for 8 plus hours a day it's reality. Us as attendants do a lot for our customers and keeping everyone safe is a main goal. Selecting half of our pumps won't speed the process of fueling up it will just add frustration and confusion to long lines of people that aren't concerned with the cars behind them.
