

Submitter: Richard Clingman

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: HB2426

SYNOPSIS:

Include the requirement that all self-serve pumps have credit card readers in working order to qualify.

DETAILS:

Without working credit card readers at the pumps, customers would be required to leave their vehicle and go to a cashier to prepay. Without the ability for the customer to conduct the transaction at the pump, this bill's unintended effect ends up being a promotional tool to force people into a convenience store to get them to buy things.

Citizens who want self-serve to save time will not be happy.

Citizens who have to deal with the added complexity of parking, leaving their vehicle to go to a cashier, possibly waiting in line, trying to guess how much fuel they need, paying, then finally going to the vehicle and self-serving will not be happy.

I ask that you please add the requirement of working credit card readers at the self-serve pumps.

Thank you.
